Foglight for mobile

Responsible for user research, IA, interpreting business and technical requirements, use cases, wireframes and documentation.

Provide Foglight users the ability to detect, diagnose and resolve (ddR) notification pending issues from anywhere everywhere and on any device. Application automatic detection is performed in the background scanning the various instances and notifying via push

Once the user engages an alarm, the actions screen is open allowing for quick and easy to use resolution methods. Alarms that do not have any resolution actions will not be pushed to the user using the push

Background

Thank you!
